A & B model approaches to surface operators and Toda theories

Wednesday, June 30, 2010 3:30 PM (1 hour)

In the first part I will give an overview of the recent results relating 4d $N=2$ quiver gauge theories, 2d conformal Toda field theories, topological string theories and quiver matrix models. In the second part surface operators in the gauge theories and their dual interpretations in the other classes of theories will be discussed
