

MITP Workshop ”Cosmic-Rays and Photons from Dark Matter Annihilation: Theoretical Issues”

Saturday, June 29, 2013 - Tuesday, July 2, 2013

[Schloss
Waldthausen](http://de.wikipedia.org/wiki/Schloss_Waldthausen) near Mainz, Germany

Book of Abstracts

Contents

Reliability of Monte Carlo event generators for gamma ray dark matter searches	1
The role of dark matter halo substructure in gamma-ray dark matter searches	1
Searching for boxes in the gamma-ray sky	1
Dark side of the Universe: enlightenment through gamma-rays and positrons	1
CMB as a probe of DM properties, complementarity to CRs	1
Constraints on dark matter annihilation through radio window in small scale galaxies	1
Enhancement of Neutralino Dark Matter Annihilation due to Electroweak Corrections	1
Internal bremsstrahlung in the Inert Doublet Model	2
Internal bremsstrahlung signatures of Dark Matter annihilations in light of direct detection and collider searches	2
Uncovering the density of Dark Matter at the centre of dwarf spheroidal galaxies	2
The phase-space two-point correlation function of galactic dark matter haloes	2
130 GeV gamma-ray line and generic dark matter model building constraints from continuum gamma rays, radio and antiproton data	2
Magnetic and Rayleigh Dark Matter	2
Coleman-Weinberg Higgs	2
125 GeV Higgs boson in the 2HDM with a singlet extension	2
Singlet portal extensions of the standard seesaw models to a dark sector with local dark symmetry	2
Antiprotons from DM annihilation in the Galaxy	3
Anti-deuteron production in WIMP annihilations	3
Updates on singlet dark matter	3
Discussion gamma rays and radiative corrections	3
Discussion non-SUSY dark matter models	3

Discussion spectral gamma-ray signatures	3
Discussion radio and microwave bounds	3
Discussion computational methods	3
The small-scale structure of Cold Dark Matter Haloes: Implication for DM detection . . .	4
GAIA a new handle on invisible DM sub-halos	4
Discussion dark matter distribution	4
Discussion dark matter distribution	4
Discussion antimatter probes for dark matter	4
Individual discussions	4
Discussions non-SUSY dark matter models	4
Final discussion session	4

251

Reliability of Monte Carlo event generators for gamma ray dark matter searches

Author: Jose Cembranos^{None}

252

The role of dark matter halo substructure in gamma-ray dark matter searches

Author: Miguel Sanchez-Conde^{None}

253

Searching for boxes in the gamma-ray sky

Author: Miguel Pato^{None}

254

Dark side of the Universe: enlightenment through gamma-rays and positrons

Author: Andi Hektor^{None}

255

CMB as a probe of DM properties, complementarity to CRs

Author: Fabio Iocco^{None}

256

Constraints on dark matter annihilation through radio window in small scale galaxies

Author: Feng Huang^{None}

257

Enhancement of Neutralino Dark Matter Annihilation due to Electroweak Corrections

258

Internal bremsstrahlung in the Inert Doublet Model

259

Internal bremsstrahlung signatures of Dark Matter annihilations in light of direct detection and collider searches

260

Uncovering the density of Dark Matter at the centre of dwarf spheroidal galaxies

261

The phase-space two-point correlation function of galactic dark matter haloes

262

130 GeV gamma-ray line and generic dark matter model building constraints from continuum gamma rays, radio and antiproton data

263

Magnetic and Rayleigh Dark Matter

264

Coleman-Weinberg Higgs

265

125 GeV Higgs boson in the 2HDM with a singlet extension

266

Singlet portal extensions of the standard seesaw models to a dark sector with local dark symmetry

267

Antiprotons from DM annihilation in the Galaxy

268

Anti-deuteron production in WIMP annihilations

269

Updates on singlet dark matter

270

Discussion gamma rays and radiative corrections

271

Discussion non-SUSY dark matter models

272

Discussion spectral gamma-ray signatures

with Torsten Bringmann and Michael Gustafsson

273

Discussion radio and microwave bounds

274

Discussion computational methods

with Fawzi Boudjema and Thomas Hahn

275

The small-scale structure of Cold Dark Matter Haloes: Implication for DM detection

276

GAIA a new handle on invisible DM sub-halos

277

Discussion dark matter distribution

with Celine Boehm

278

Discussion dark matter distribution

with Celine Boehm

279

Discussion antimatter probes for dark matter

with Piero Ullio

280

Individual discussions

281

Discussions non-SUSY dark matter models

282

Final discussion session
