

Basic Send/Receive Commands	-
<pre>int MPI_Send(void *buf, int count, MPI_Datatype dtype, int dest, int tag, MPI_Comm comm);</pre>	
MPI_SEND(BUF, COUNT, DTYPE, DEST, TAG, COMM, IERR)	
Buffer Count Datatype Body Tag Communicator Envelope	
<pre>int MPI_Recv(void *buf, int count, MPI_Datatype dtype, int source, int tag, MPI_Comm comm, MPI_Status *status);</pre>	
MPI_RECV(BUF, COUNT, DTYPE, SOURCE, TAG, COMM, STATUS, IERR) 7	

Example	
double a[100],b[100];	
if( myrank == 0 ) /* Send a message */ {	
for (i=0;i<100;++i)	
<pre>a[i]=sqrt(i); MPI_Send( a, 100, MPI_DOUBLE, 1, 17, MPI_COMM_WORLD ); }</pre>	
else if( myrank == 1 ) /* Receive a message */	
MPI_Recv( b, 100, MPI_DOUBLE, 0, 17, MPI_COMM_WORLD, &status	3);
What happens	
(if b is replaced)	
with a?	
~ .	8

## Pros and Cons of different modes

Advantages	Disadvantages
Synchr	onous Mode
Safest, most portable	Can occur substantial synchronization overhead
Rea	ady Mode
Lowest total overhead	Difficult to guarantee that receive precedes send
Buffe	ered Mode
Decouples send from receive	Potentially substantial overhead through buffering
Stan	dard Mode
Most flexible, general purpose	Implementation dependent

## Sendrcv Example

```
if (myid == 0) then
  call mpi send(a,1,mpi real,1,tag,MPI COMM WORLD,ierr)
  call mpi_recv(b,1,mpi_real,1,tag,MPI_COMM_WORLD,
                status, ierr)
elseif (myid == 1) then
   call mpi_send(b,1,mpi_real,0,tag,MPI_COMM_WORLD,ierr)
  call mpi_recv(a,1,mpi_real,0,tag,MPI_COMM_WORLD,
                status,ierr)
end if
if (myid == 0) then
  call mpi_sendrecv(a,1,mpi_real,1,tag1,
                     b,1,mpi_real,1,tag2,
                     MPI_COMM_WORLD, status,ierr)
elseif (myid == 1) then
   call mpi_sendrecv(b,1,mpi_real,0,tag2,
                     a,1,mpi real,0,tag1,
                     MPI_COMM_WORLD, status,ierr)
                                                              29
end if
```

## Example

```
if( myrank == 0 ) {
  /* Post a receive, send a message, then wait */
 MPI Irecv( b, 100, MPI DOUBLE, 1, 19, MPI COMM WORLD,
             &request );
 MPI_Send( a, 100, MPI_DOUBLE, 1, 17, MPI_COMM_WORLD );
 MPI_Wait( &request, &status );
}
else if( myrank == 1 ) {
  /* Post a receive, send a message, then wait */
 _MPI_Irecv( b, 100, MPI_DOUBLE, 0, 17, MPI_COMM_WORLD,
             &request );
 - MPI_Send( a, 100, MPI_DOUBLE, 0, 19, MPI_COMM_WORLD );
 MPI_Wait( &request, &status );
}
 No deadlock because non-blocking receive is posted before send
                                                           35
```
