Scattering amplitudes and algebraic geometry — Elliptics and beyond

Tuesday, November 23, 2021 5:20 PM (20 minutes)

In this talk I will describe scattering amplitudes from the point of view of algebraic geometry. This leads to extra structure on the intervening amplitudes which is very useful in both theory and practice. The focus of this talk will lie on integrals related to elliptic curves, but time permitting I will also sketch what lies beyond.
