*Spectroscopic characterization of
galaxies at $9.5 < z < 12.5$
in the Abell2744 field*

Lorenzo Napolitano (lorenzo.napolitano@inaf.it)

Supervisor: L. Pentericci ***Co-supervisor:*** M. Castellano

Collaborators: P. Arrabal-Haro, A. Calabrò, M. Dickinson, A. Fontana, S. Mascia

An open question: Star Formation Rate Density at $z = 10$

We (think we) know well the evolution of the SFRD at $z < 8$!

JWST has opened the exploration of the UVLF at $z > 10$
(see *Yuichi* and *Callum's* talks)

?

Continued smooth or
accelerated decline at $z > 8$?

Robust $z > 9$ candidates in the A2744 field

Castellano & GLASS team 22, 23

Spectroscopic confirmations in the A2744 field

Goulding+23, Bogdan+23,
 UHZ1 : $z = 10.07$, $M_{\text{uv}} = -19.85$

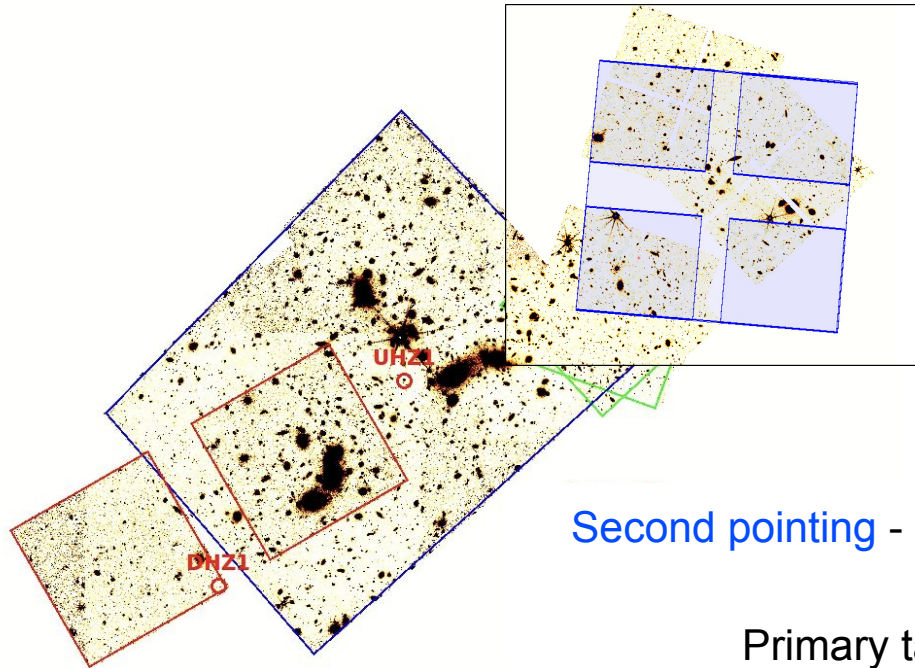

Boyett+23, DHZ1: $z = 9.31$, $M_{\text{uv}} = -20.92$

Castellano & GLASS team 22, 23

NIRSpec follow-up of GLASS ERS (GO-3073, PI Castellano)

12 hours of NIRSpec PRISM on 2 pointings to confirm $z \sim 9 - 12$ galaxies in the GLASS-ERS area

First pointing - Observed on Oct. 25 2023

Primary targets:

GHZ2, GHZ7, GHZ8, GHZ4, GHZ9

Second pointing - Planned for June/July 2024

Few weeks from now!

Primary targets: GHZ1, GHZ4, GHZ9

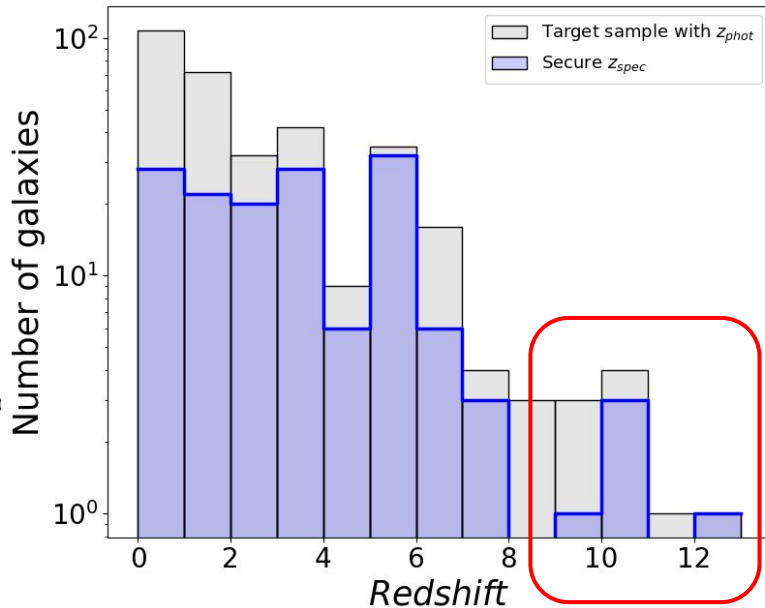

New spec-z confirmations at $z \geq 9.5$

(Napolitano+24b, in prep.)

214 redshift identifications

Data reduction by L. Napolitano

GLASS-83338 - $z = 9.523 \pm 0.004$

a candidate from Atek+23

$$\beta = -2.63 \pm 0.25$$

$$M_{uv} = -19.24$$

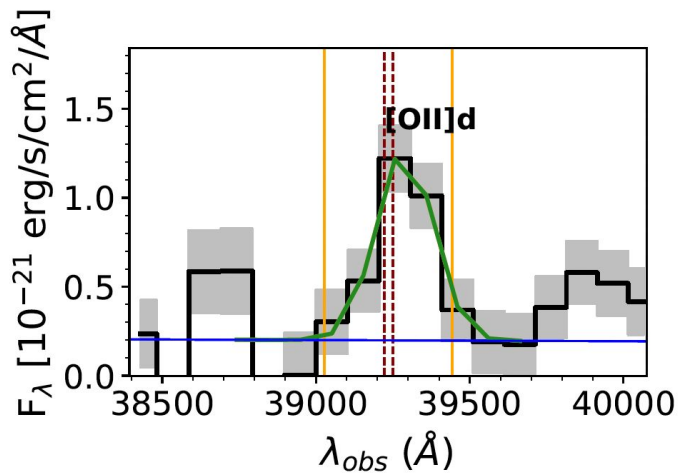

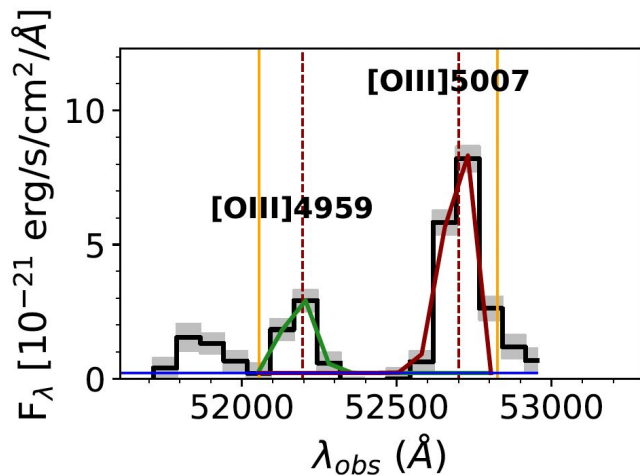

GLASS-83338 - $z = 9.523 \pm 0.004$

a candidate from Atek+23

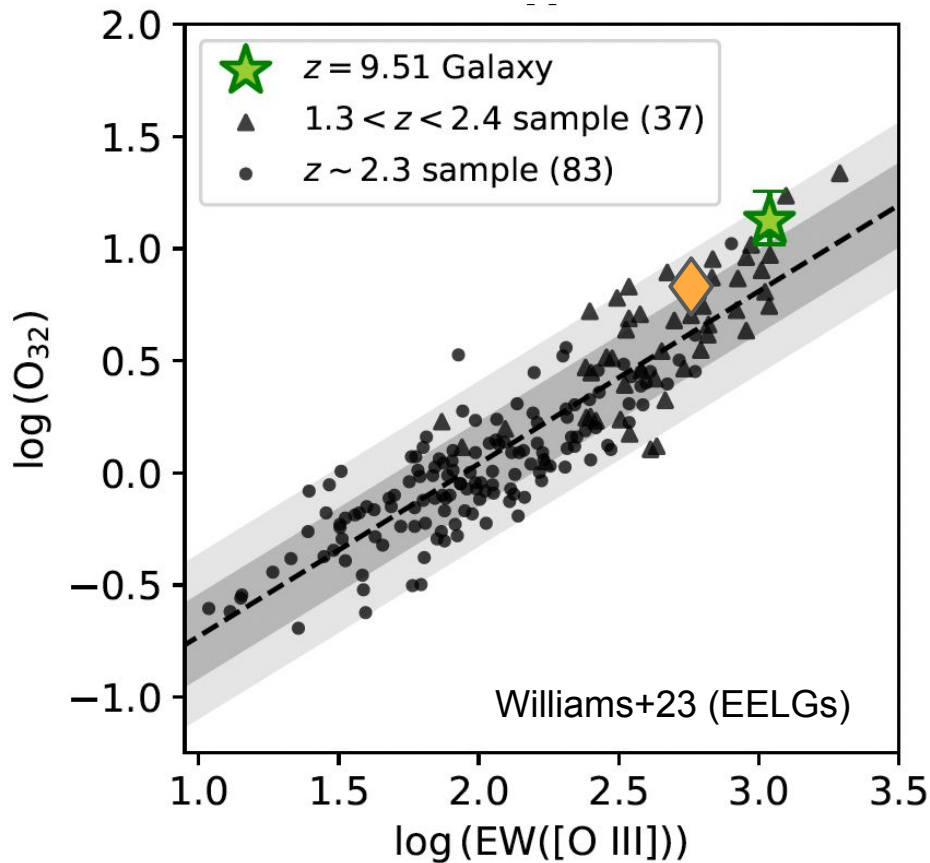

Emission lines
detected at $\text{SNR} > 3$

Modeling with a
Gaussian fit and local
continuum subtraction

GLASS-83338 - $z = 9.523 \pm 0.004$

a candidate from Atek+23

$$O_{32} = 6.5 \pm 1.1$$

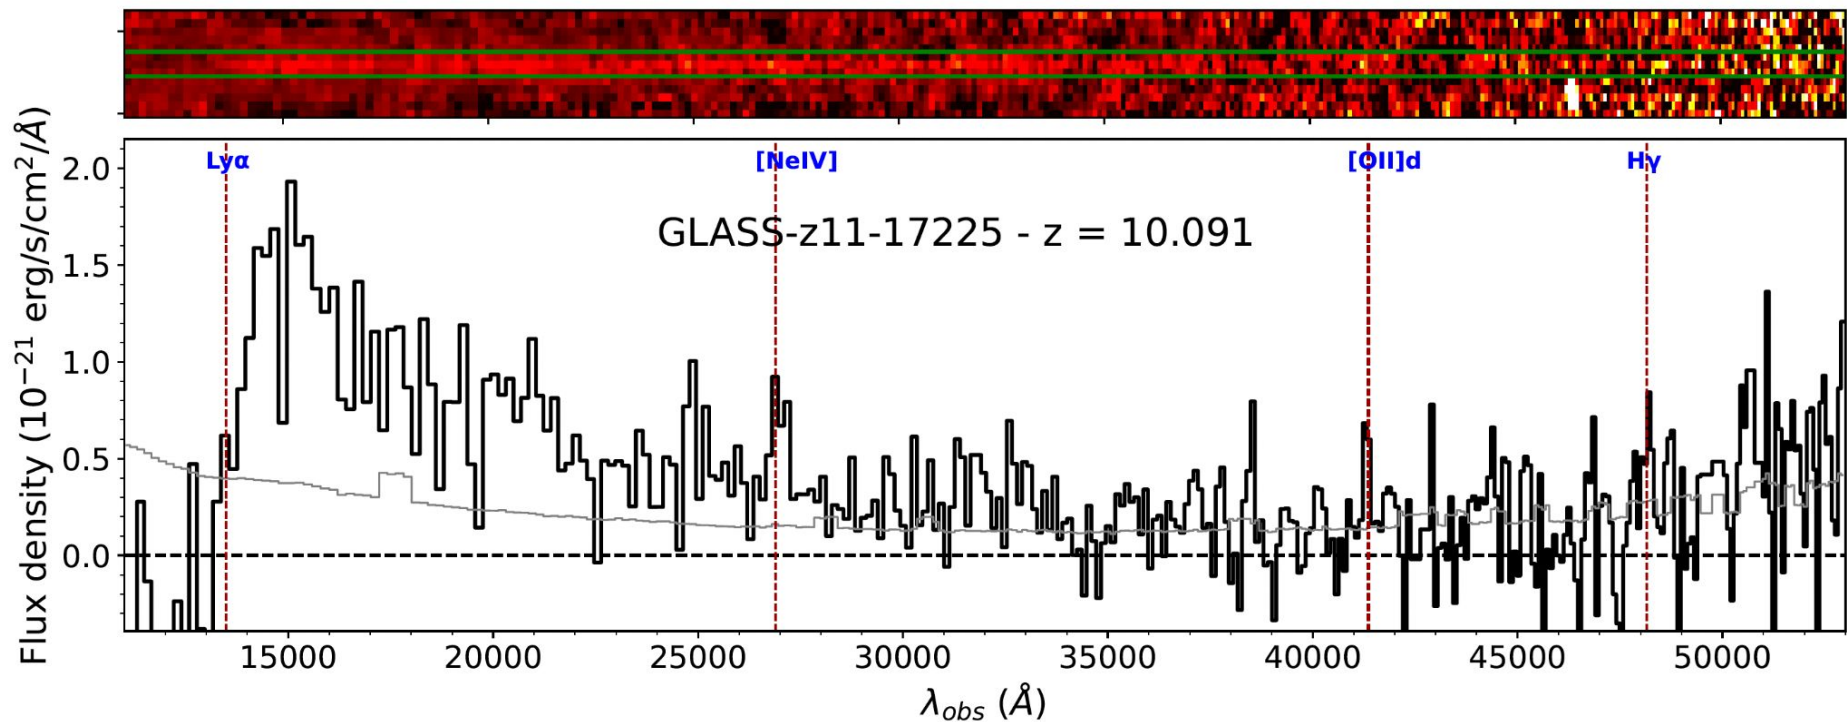

$$\frac{[O III]5006}{[O III]4959} = 3.5 \pm 0.6$$

GLASS-z11-17225 - $z = 10.091 \pm 0.010$

a candidate from McLeod+24

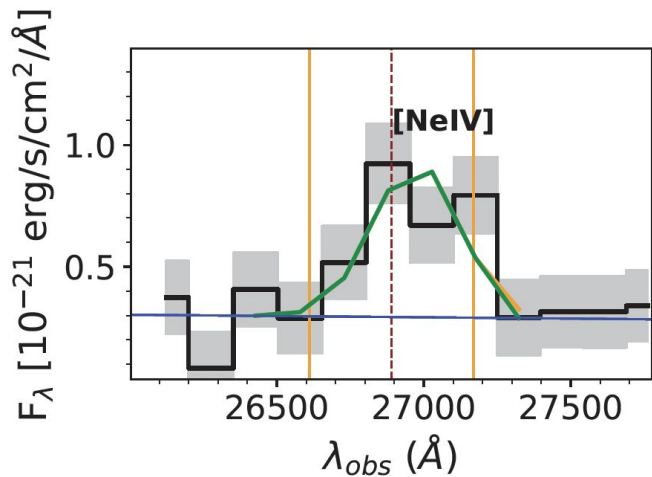

$$\beta = -2.55 \pm 0.21$$

$$M_{\text{uv}} = -19.08$$

GLASS-z11-17225 - $z = 10.091 \pm 0.010$

a candidate from McLeod+24

GHZ9 - $z = 10.147$

a candidate from Castellano+23

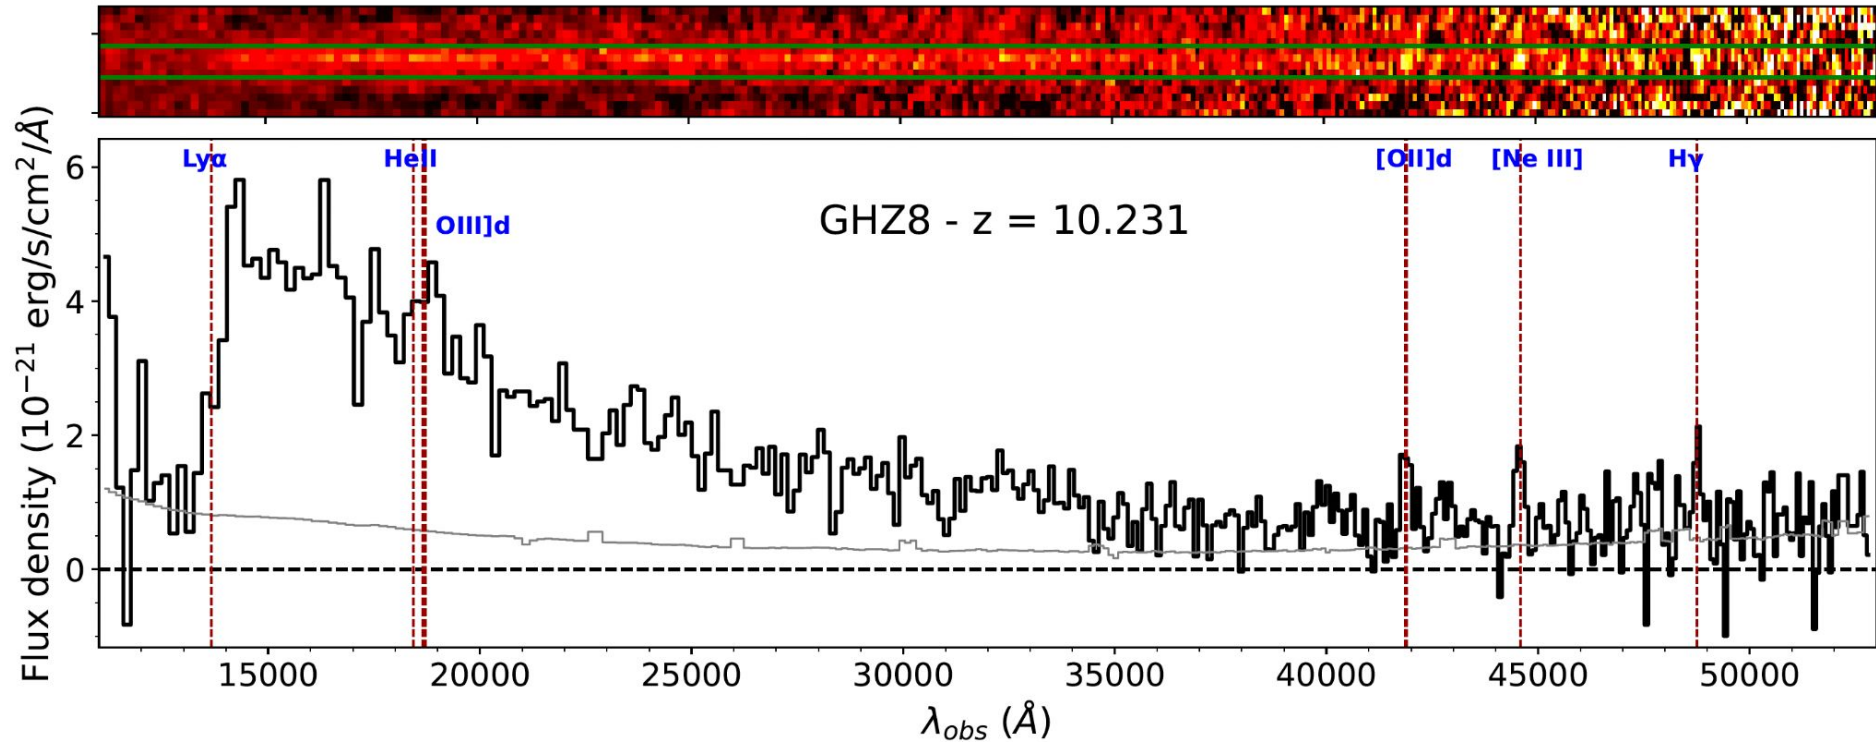

GHZ8 - $z = 10.231 \pm 0.007$

a candidate from Castellano+23

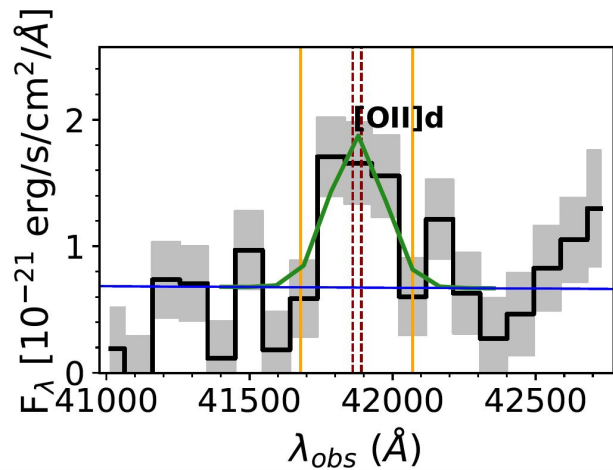

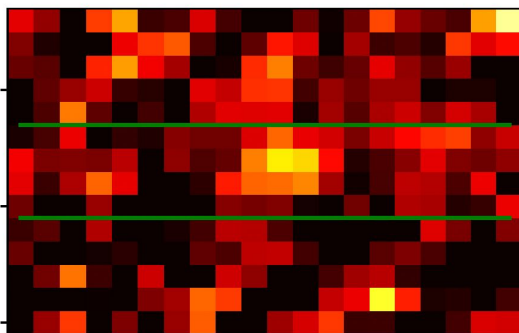

$$\beta = -2.26 \pm 0.11$$

$$M_{UV} = -20.73$$

GHZ8 - $z = 10.231 \pm 0.007$

a candidate from Castellano+23

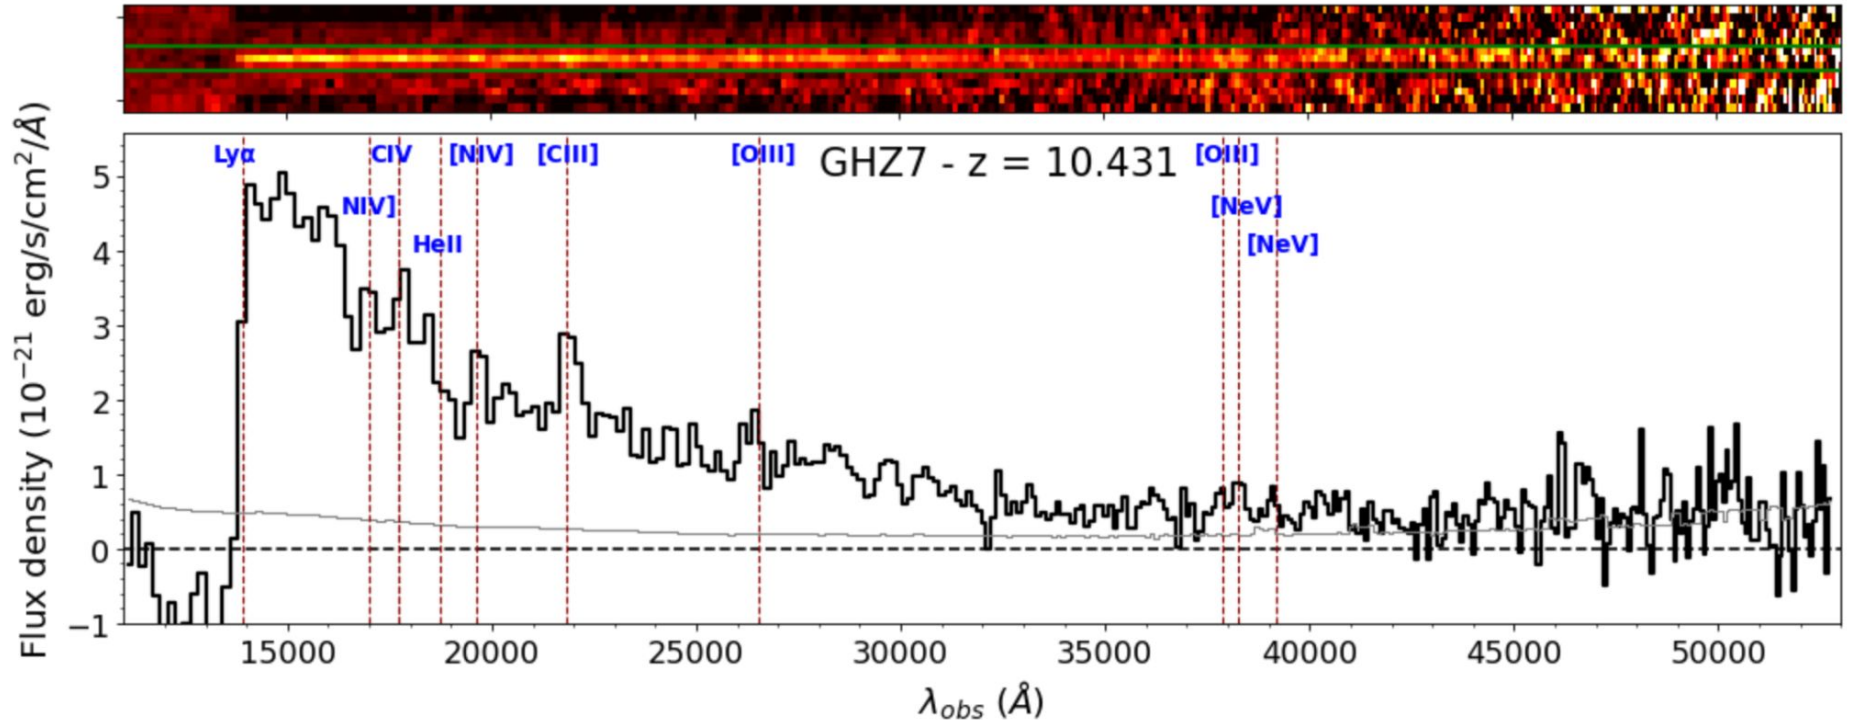

GHZ7 - $z = 10.431 \pm 0.031$

a candidate from Castellano+23

$\beta = -2.25 \pm 0.10$

$M_{uv} = -20.06$

GHZ7 - $z = 10.431 \pm 0.031$

a candidate from Castellano+23

97.11 eV are required!

GHZ4 - $z = 10.66 \pm 0.11$

a candidate from Castellano+23

$\beta = -2.27 \pm 0.31$

$M_{uv} = -19.44$

GHZ2/GLASS-z12 - $z = 12.342 \pm 0.009$

a candidate from Castellano+22, Naidu+22

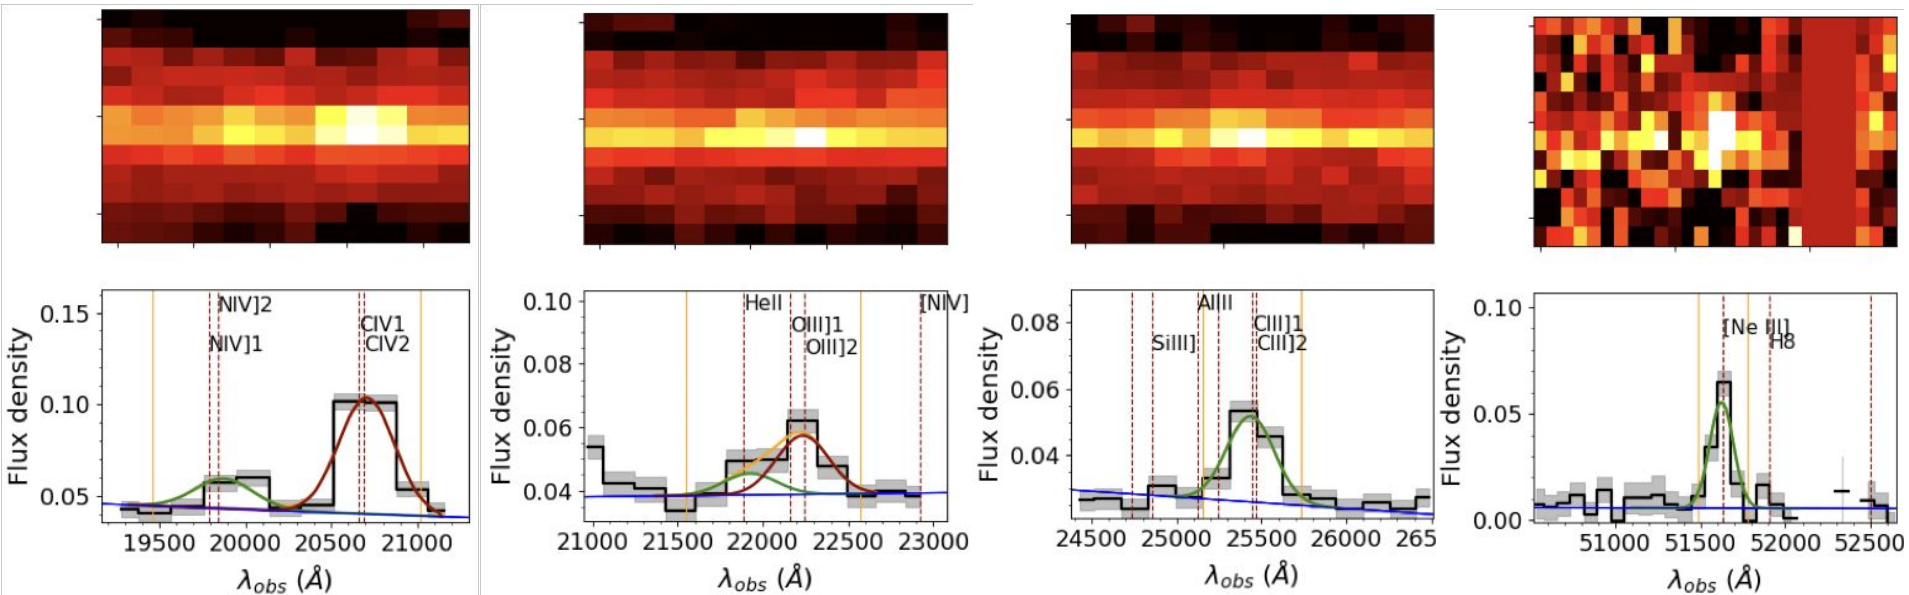

$$\beta = -2.46 \pm 0.08$$

$$M_{\text{uv}} = -21.19$$

GHZ2/GLASS-z12 - $z = 12.342 \pm 0.009$

a candidate from Castellano+22, Naidu+22

CIII] emission evolution

CIII] emitters from literature:

Arrabal-Haro+23, Bunker+23a,b,
D'Eugenio+23, Goulding+23,
Hsiao+23, Williams+23, Carniani+24,
Hainline+24, and Maiolino+24

Roberts-Borsani+24

from stacks:

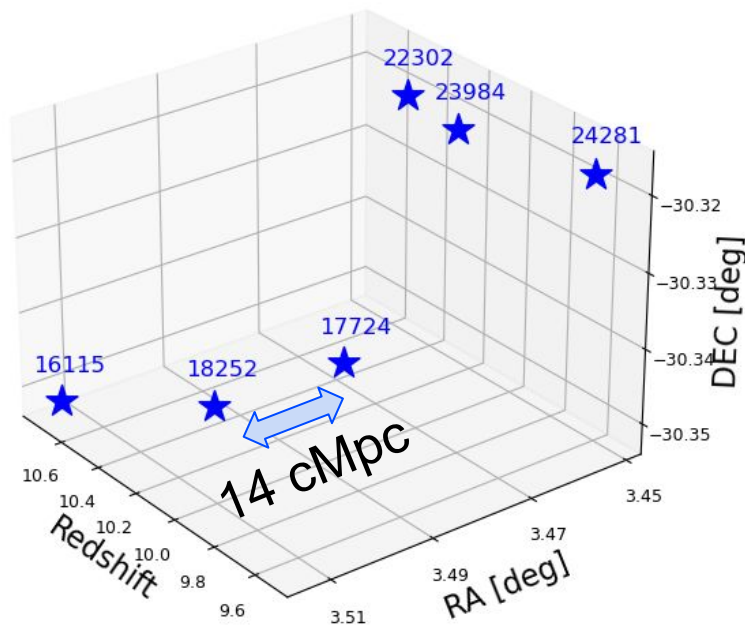

$$EW_0(\text{CIII])} = 1.84 \times z - 5.38$$

AGN diagnostics at $z > 10$

AGN and **SF** models by
Nakajima & Maiolino 2022

Are these galaxies part of a proto-cluster at $z = 10$?

Lower-redshift proto-clusters found at $z = 5.5 - 7.5$
Toshikawa+12, Harikane+19, Hu+21, Morishita+23

6 observed galaxies at $9.5 < z < 11$ in the GLASS field

Donnan+23

...see Callum's talk

Expected: < 7 at 2σ

Finkelstein+23

see also UV-LF results from Perez-Gonzalez+23, Harikane+24, Willott+24, McLeod+24

Summary:

- 1) We derived secure z_{spec} for 214 galaxies targeted by GO-3073, PI Castellano.
- 2) We confirm all the observed $z \geq 9.5$ candidates in the GLASS-ERS field.
- 3) Some sources show very high $EW_0(\text{CIII])}$: are these AGNs?
→ Interesting implications for the bright end of the LF.
- 4) These sources are not part of a proto-cluster at $z = 10$.

Napolitano et al.
2024b, in prep.

What's next:

New data (second pointing, same field) in few weeks... 28 high-priority candidates to confirm!!

Feel free to reach out: lorenzo.napolitano@inaf.it

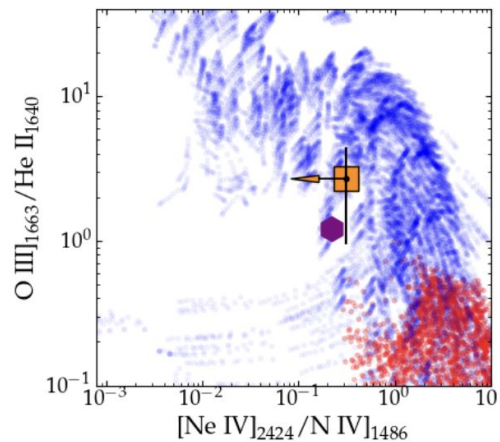

Thank you!
