

# AI Discussion Forum

## Working group proposal

# Purpose

- The goal is to have a shared forum where concerns/issues/questions about AI can be raised and discussed in an inclusive manner
- **What the discussion group should *never* be: an echo chamber**
  - The discussion group should be in a constant feedback loop with the other working groups: insights from the working groups are important input to the discussions, and the discussions provide important input for the working groups

# The discussions

- There's a large variety of topics that can be discussed in relation to AI
  - **I propose we start with topics directly related to work being done in the other working groups, and then slowly build out from there**
- Everyone will be able to bring up topics for discussion, both during the meeting and outside of it, and other working groups can also request topics that come up in their meetings
- The discussions should be somewhat structured for them to be productive. How to set this up will be discussed in the first meeting

# Organisation

- Bi-weekly meetings that do not overlap with any of the other breakout meetings to allow for flexible attendance from other working groups
  - [Poll](#) for meeting times
  - [Signup sheet](#) if you're interested in attending regularly :)
- For the first meeting, we will discuss the organisation of the discussions, plan the first few topics, and hopefully have time for a fun warmup discussion
- Summary of discussions will be presented in the hub meetings, and at some point we'll compose a report
